West Jakarta- Grogol Petamburan, Indonesia

Personal Profile

Full Stack Developer with over 6 years of experience in architecting high-performance web applications and mission-critical real-time monitoring systems. Proven expertise in leading national-scale infrastructure projects, including air traffic control and maritime surveillance for government agencies. Committed to delivering secure, scalable, and user-centric digital solutions in fast-paced environments.

Work Experience

- **PT MANDIRI SUKSES INFORMATIKA (2019 - 2021)**

Fullstack Developer :

- 1 Developed and maintained web applications both on the frontend and backend.
- 2 Collaborated with UI/UX teams to deliver responsive and user-friendly interfaces.
- 3 Designed and implemented RESTful APIs to support application features.
- 4 Managed database integrations and ensured optimal system performance.
- 5 Conducted debugging, testing, and optimization.
- 6 Wrote technical documentation for development and system usage.
- 7 Coordinated with QA, DevOps, and stakeholders regarding technical requirements.

- **PT CASBAR PANCARAN BERKAT (2021-2022)**

Software Engineer :

Fullstack Developer dan Designer 3D

- 1 Designed, developed, and tested high-quality software tailored to company needs.
- 2 Worked in a development team to build backend, frontend, and end-to-end systems.
- 3 Contributed to system architecture planning and technology selection.
- 4 Conducted code refactoring and maintenance to ensure scalability and efficiency.
- 5 Applied best software development practices including version control, code review, and testing.

- **PT SIBERNETIK INTEGRA DATA (2023-2026)**

Full Stack Developer :

Key Projects and Technical Achievements

1. Lead (PIC) for the State Intelligence Agency (BIN): Oversaw and executed high-security national projects, including the development and maintenance of Air Surveillance (Air Traffic Control) systems.
2. Ministry of Transportation (Marine Project): Architected and deployed a nationwide real-time monitoring platform for Marine Vessel traffic across Indonesia, enabling live vessel tracking and centralized operational management.
3. End-to-End Data Integration: Engineered complex data stream pipelines from third-party vendors into a proprietary processing engine, facilitating seamless real-time data visualization on the user interface.
4. System Architecture & Optimization: Fine-tuned system architecture and database queries, resulting in a significant boost in data processing speed and overall application responsiveness.
5. Optimization: Melakukan optimasi arsitektur sistem dan *query* database yang meningkatkan kecepatan pemrosesan data secara signifikan.
6. Stakeholder Collaboration: Acted as the primary technical liaison between operations and client teams to define mission-critical requirements and deliver robust, secure software solutions.

Freelancer & Key Project | 2022 – Present

1. ITB (Bandung Institute of Technology): Developed a real-time QR-code-based registration and attendance system for internal institutional projects.
2. Automated Data Acquisition: Built scalable web scraping pipelines using Python (Selenium/Puppeteer) to process large-scale datasets for data-driven client initiatives.
3. API & Security: Implemented secure third-party integrations (WhatsApp API, Google Maps) and robust JWT-based authentication mechanisms.

Leveraged front-end technologies to design and integrate 3D models and simple animations, significantly enhancing interactive web content and user engagement.

1. Developed a registration and attendance system using QR code technology for an internal ITB (Bandung Institute of Technology) project, with real-time monitoring features.
2. Built websites using Agile development logic, incorporating iterative delivery, user feedback, and collaborative planning.
3. Collaborated remotely with international clients using tools like GitHub Gitlab.

Skills & Tools

React.js, Next.js, Vue.js, TypeScript, Tailwind CSS, Bootstrap, Node.js, Express, Vite, Three.js, Python, Go, Java, (BeautifulSoup, Requests, Selenium), Puppeteer, Cheerio, MySQL, PostgreSQL, MongoDB, JWT Auth, REST API, Blender, Git, GitHub, GitLab, Postman, Trello.

Education dan Certification

1. Enigma Camp – Backend Developer Java
2. IT-BOX – FullStack Developer JavaScript
3. B.S. in Informatics Engineering – University YPKP Sangga Buana, Bandung.
